## Yosemite

**C**HURNED TO FROTH in its wild leap, Yosemite Falls plunges with such force that the ground trembles at its base. Upper Fall, Middle Cascade, and Lower Fall plummet a combined 2,425 feet—North America's loftiest cataract.

Swollen by spring melt, the falls fills Yosemite Valley with its thunderous roar. In early summer the waning waters whip in the wind like a gossamer veil. By mid-August only a tear trickles down the canyon face.

Pressed between sheer rock walls half a mile high, Yosemite Valley follows a seven-mile gorge carved by glaciers and the Merced River. From hanging valleys high above the river spill many other spectacular falls, including Bridalveil, Vernal, Illilouette, Nevada, and Ribbon, which drops 1,612 feet, longest single fall on the continent.

Yosemite became a national park in 1890, a few days after nearby Sequoia attained park status.

CPYRGHT

**Yosemite firefall** rains a river of embers down the face of Glacier Point.

Each summer evening a bonfire of bark from fallen trees blazes atop the cliff. Dying, it leaves a huge bed of glowing embers. As twilight deepens into night, an expectant bush awakens, rising

sounds in the darkness, "I let the fire fall" and then with long-handled rakes push the coals over the brink. As if in slow motion, the fiery torrent drifts toward the canyon floor, consuming itself as it falls.
